

Interfacing ADC0804 with 8088 CPU through 8255 PPI

ADC0804 Analog-to-digital converter

Interfacing ADC0804 with 8255

Interfacing 44780 LCD with 8088 CPU through 8255 PPI

Pinout, commands, interfacing

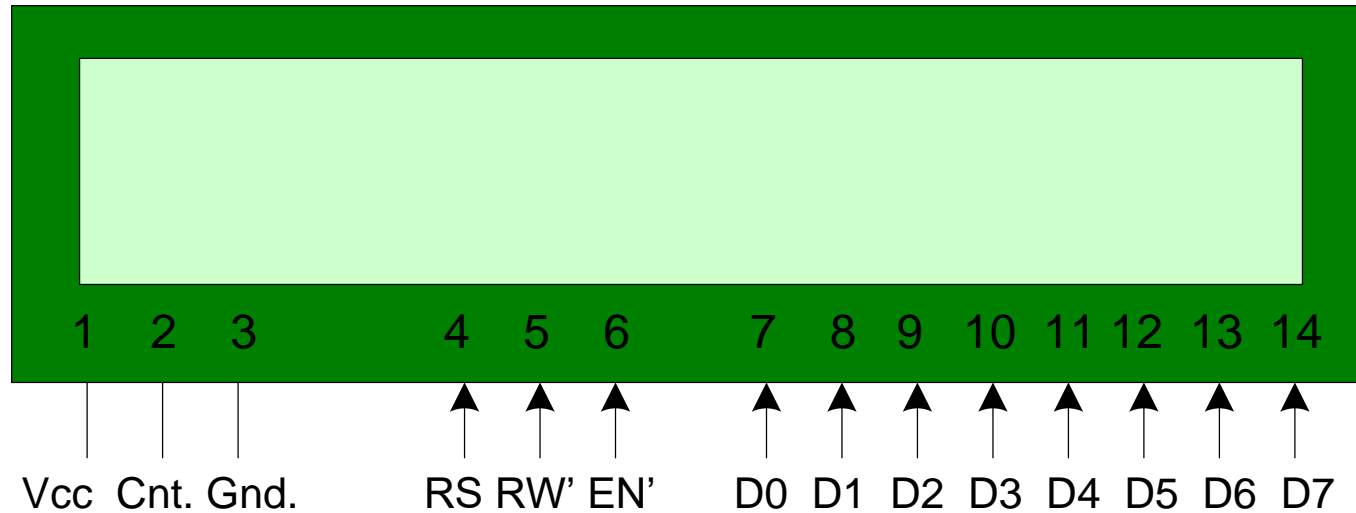

Liquid Crystal Display (LCD) Module

44780 LCD Controller

- Controls alphanumeric printing on LCD
- Has 8-bit and 4-bit interface
- Single controller can control one 16x2 character LCD
- Takes ASCII codes as input for characters to be printed

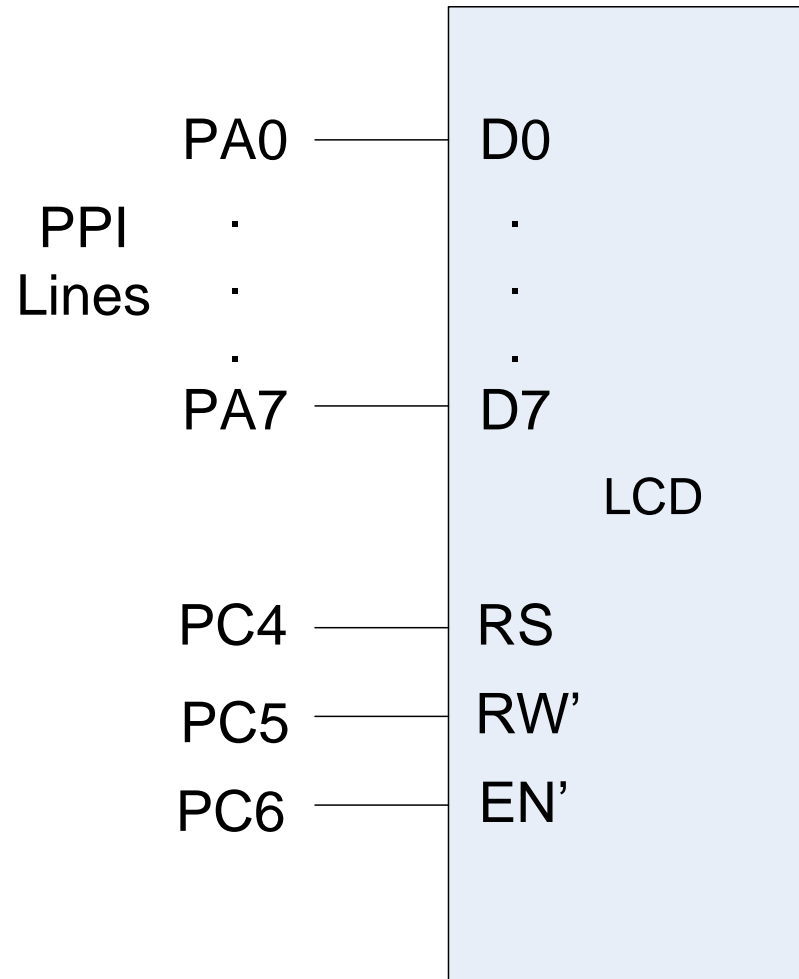

LCD module pinouts

LCD Commands

| Command | Function |
|---------|---|
| 38H | 8-bit Interface (*must be the first command sent to LCD controller) |
| 0EH | Turn on underline cursor |
| 0FH | Turn on blinking block cursor |
| 0CH | Make cursor invisible |
| 06H | Cursor auto-right move |
| 80H | Cursor on column0, row0 (80H+column no.) |
| C0H | Cursor on column0, row1 (C0H+column no.) |

Interfacing LCD with PPI

Writing a command byte to LCD

- $RS = 0$ (selecting command register)
- $R\bar{W} = 0$ (for write operation)
- $EN = 1$ (H->L transition required)
- $D7...D0 = \text{command byte}$
- $EN = 0$
- Leave $EN = 1$

Writing a data byte to LCD

- $RS = 1$ (selecting data register)
- $R\bar{W} = 0$ (for write operation)
- $EN = 1$ (H->L transition required)
- $D7...D0 = \text{ASCII of character to display}$
- $EN = 0$
- Leave $EN = 1$
